

Job Description

Java Developer

We are looking for a Java Developer with experience in building high-performing, scalable, enterprise-grade backend applications on a Linux platform in a mix of on-prem and cloud environments.

You will be part of a talented software team that works on greenfield mission-critical applications for our software products that Fortune 500 companies depend on to mitigate their internal security risks. The developer in this role will be a member of the team responsible for processing a stream of events originating from several different NAS systems' audit policies as well as integrating reporting on the events within our existing solution. This is a highly visible role that presents an opportunity for the right developer to make a major impact on the company's product.

Essential Functions:

- Contribute to all phases of the development lifecycle
- Write well designed, maintainable, efficient code for a high throughput environment
- Skilled in the design and documentation of specifications alongside the ability to present these designs to colleagues from non-technical teams
- Support continuous improvement by investigating alternative technologies and presenting these for architectural review

Requirements:

- 5-10 years of experience as a Java developer
- BS / MS degree in Computer Science, Engineering, or a related subject
- Hands on experience in designing and developing applications using Java with Maven for build and deployment
- Broad experience with designing and consuming APIs
- Object oriented analysis and design using common paradigms/algorithms
- Profound insight of Java internals with an eye toward performance (multi-threading and concurrency design patterns, memory management...etc.)
- Experience with Kafka message queues and/or RabbitMQ as producer/consumer (pub/sub)
- Experience with MS SQL, MySQL/mariadb, Spark, Hadoop, and Hive
- Familiarity with cloud providers such as Azure, AWS or GCP
- Any additional experience with C# .NET, stream processing, NAS management, user activity auditing, security best practices, or Linux sysadmin duties is a major bonus
